

INTRODUCTION TO DATA ANALYSIS & MACHINE LEARNING FOR PROFESSIONALS

PRACTICAL DATA SKILLS FOR BETTER BUSINESS DECISIONS

MAKE BETTER DECISIONS WITH DATA

Work with real data • Build simple predictive models • Communicate insights with confidence

Modern professionals are expected to work with data, interpret results, and support decisions with evidence — yet many have never been trained to do so confidently. This hands-on course gives you practical skills to analyse data, uncover insights, and use simple machine learning tools in your daily work - no technical background required.

WHAT YOU WILL GAIN

- Work confidently with real datasets
- Clean and prepare messy data
- Visualise trends and patterns
- Understand how machine learning supports decisions
- Build simple predictive models
- Communicate insights clearly to stakeholders

“Turn data into decisions. Turn insights into action.”

HOW THE TRAINING WORKS

Total Duration: **12 Hours**

Dates: **26/11 & 01/12** (6 hours each)

Method: **Online**

Cost: **€60**

This course focuses on practice over theory, using Python, the industry-standard tool for data analysis.

WHY IT MATTERS FOR YOUR ORGANISATION

- Better, evidence-based decisions
- Improved ability to interpret reports and KPIs
- Stronger forecasting and performance insights
- Reduced dependency on external specialists

PROFESSIONAL DEVELOPMENT PROGRAMME

The programme has been approved by the HRDA. Enterprises/organisations participating with their employees who satisfy HRDA's criteria, are entitled to subsidy.

WHAT YOU WILL LEARN

Session 1 – Data Foundations

- Understanding datasets and data types
- Cleaning and preparing real-world data
- Introduction to the Python environment

Session 2 – Exploring & Predicting

- Exploratory data analysis
- Data visualisation techniques
- Building a simple forecasting model

Session 3 – Discovering Patterns

- Classification and decision models
- Clustering and segmentation
- Mini project combining all skills

WHO IS THIS FOR?

Professionals, managers, analysts, and decision-makers across sectors who want to use data more effectively in their roles

No programming experience required.

READY TO BUILD YOUR DATA SKILLS?
